30th April - 2nd May 2009

Melbourne Convention & Exhibition Centre

1pm-2pm | S7

Genetic Codes - Understanding small sites. The new 'big' experience.

Presenters: Matt Gibson of Matt Gibson A&D, Mark Richards of Mark Richards Architects and Robert Simeoni of Robert Simeoni Architects

The impact of the Designer / Architect on a building's DNA is immense, nowhere more so than on awkward, and in particular, small sites.

The potentials of a project can be found in the very limitation that was an issue, and what we are currently seeing, in the works of emerging design practices are edgy, dynamic, sometimes experimental solutions that are entirely appropriate, yet different ways of working within small parameters.

From an environmental and sustainable stance small is entirely appropriate, but as is evidenced from the body of work of emerging design practices; Matt Gibson A&D, Mark Richards Architects and Robert Simeoni Architects, small is the new big experience.
